

Old Airport Park Cone Set-up

1. Bring each cart of cones from storage to the corner of the southwest end of the runway and the point that lines up with the power pole and the concrete abutment.
2. Place sandwich board sign with permit attached at that point.
3. Place one set of cones in line with the power pole and the concrete abutment about 10 feet apart from the corner to a point near the mulch pile.
4. Leave the cart with the caution sign facing out at the end of the line.
5. Place the other set of cones about 10 feet apart in a line with the outer edge of the runway. Leave an opening for the "pits" parking, just to the west of this line, near the center of this line. Leave four cones for a "Pilot Line" on the double marked line just to the east of the "pits" opening.
6. Continue placing cones about 10 feet apart in line with the outer edge to the rock line at the north end of the runway.
7. Leave the cart with the caution sign facing out at the end of the line.
